## Centers for Disease Control and Prevention: Preventing HIV transmission, saving lives, reducing health care costs

---

### New Jersey

CDC total (FY 23): \$325.3 million<sup>i</sup>

HIV, viral hepatitis, STI & TB prevention funding (FY 23): \$27.9 million<sup>ii</sup>

HIV prevention funding (FY 23): \$21.9 million<sup>iii</sup>

Ending the HIV Epidemic (EHE) funding (FY 24): \$3,077,499<sup>iv</sup>

### The impact of HIV prevention funding

- 89% of CDC HIV prevention funding goes to state and local health departments and community-based providers.
- New HIV cases declined by 12% from 2018 to 2022 — saving at least \$2.2 billion in health care costs.
- In jurisdictions receiving EHE funding, new HIV cases declined by 21% compared to just 6% in non-EHE jurisdictions.
- HIV prevention funding provides critical infrastructure for STI, viral hepatitis and TB prevention programs.

Progress in HIV prevention continues with an overall 12% decline in estimated HIV infections from 2018 to 2022.

Ending  
the  
HIV  
Epidemic

Overall Goal: Decrease the estimated number of new HIV infections to 9,300 by 2025 and 3,000 by 2030.

---

Every new HIV case prevented  
saves at least \$500,000 in lifetime health care costs

---

### The great potential for pre-exposure prophylaxis (PrEP)

- In New Jersey, only 31.6% of individuals who could benefit from PrEP are prescribed medications for PrEP.<sup>v</sup>

---

PrEP is 99% effective at preventing HIV acquisition

---

### What's at stake<sup>vi</sup>

- A 50% cut in HIV prevention funding would result in an estimated 75,289 new HIV infections by 2030 for an estimated \$31.6 billion in lifetime health care costs.
- A 100% cut in HIV prevention funding would result in an estimated 143,486 new cases for an estimated \$60.3 billion in lifetime health care costs.
